Option A Launch Budget - Detailed Production Draft (Kenya)

Date: 20 August 2026 | Currency: KES | FX baseline: 1 USD = KES 130

Objective: first production launch with real users on iOS and Android, including backend and AI inference deployment.

Phase	Paid To	Cost Item	Freq.	Amount (KES)	USD Ref	When Needed	Launch Impact
Legal setup	eCitizen (Government of Kenya)	Business name registration	One-time	950	-	Pre-launch	Establishes legal business identity required for contracts, invoicing and platform operations.
Brand and web trust	Domain registrar (True host/HostPinnacle/HostAfrica)	.com domain (1 year)	Annual	1,800	-	Pre-launch	Creates trusted public endpoint for legal pages, support, and scout/player verification links.
iOS distribution	Apple	Apple Developer Program	Annual	12,870	USD 99	Before App Store submission	Mandatory to sign and publish iOS builds, manage TestFlight, and ship App Store updates.
Android distribution	Google	Google Play Console account	One-time	3,250	USD 25	Before Play Store submission	Mandatory account to publish and maintain Android production releases on Google Play.
Backend and database	Supabase	Production DB/Auth/Storage (Free launch tier)	Monthly	0	USD 0	Go-live	Runs user accounts, profile data, app content and storage with no immediate cash outlay at MVP scale.
AI runtime	Render or Railway	AI inference API hosting	Monthly	3,250	USD 25	Go-live	Keeps the AI service online so user video uploads can be processed into ratings in production.
			One-time subtotal	4,200			
			Annual subtotal	14,670			
			Monthly run-rate	3,250			
			Estimated first-year total	57,870			

Execution Notes

- 1) Supabase is shown as Free tier at launch to keep costs low. Move to Pro immediately when storage or database usage grows.
- 2) AI hosting is costed at a baseline always-on service. Higher traffic or GPU workloads can increase monthly spend.
- 3) This draft excludes optional marketing, legal review, CI/CD paid tiers and CDN add-ons so you can see pure launch essentials.
